

School Facilities Building Value

This list contains building values for public school facilities per Rules Governing the Facilities Master Plan (Master Plan Rules) section 3.05. Please note that the list contains both academic and non-academic buildings. Building values are a function of building age only and do not reflect any improvements made to the buildings. Building construction dates are entered by school districts during Master Plan submission cycles. Building Value is calculated by multiplying two (2) times the age of the building and subtracting that product from one hundred (100), expressed as a percent. (Value = 100-(2x Building Age)). (Master Plan Rules section 3.05.1) The school district's Master Plan shall address all academic facilities with a Building Value of zero percent (0%) or below. (Master Plan Rules section 4.04). School districts are not required to replace buildings with a value at or below zero percent (0%) based only on calculated Building Value. (Master Plan Rules section 4.04.2.3)

District Name	School Name	Building Name	Gross Sq Ft	Built Date	Building Value
